

Frequently asked question

Adding new reports

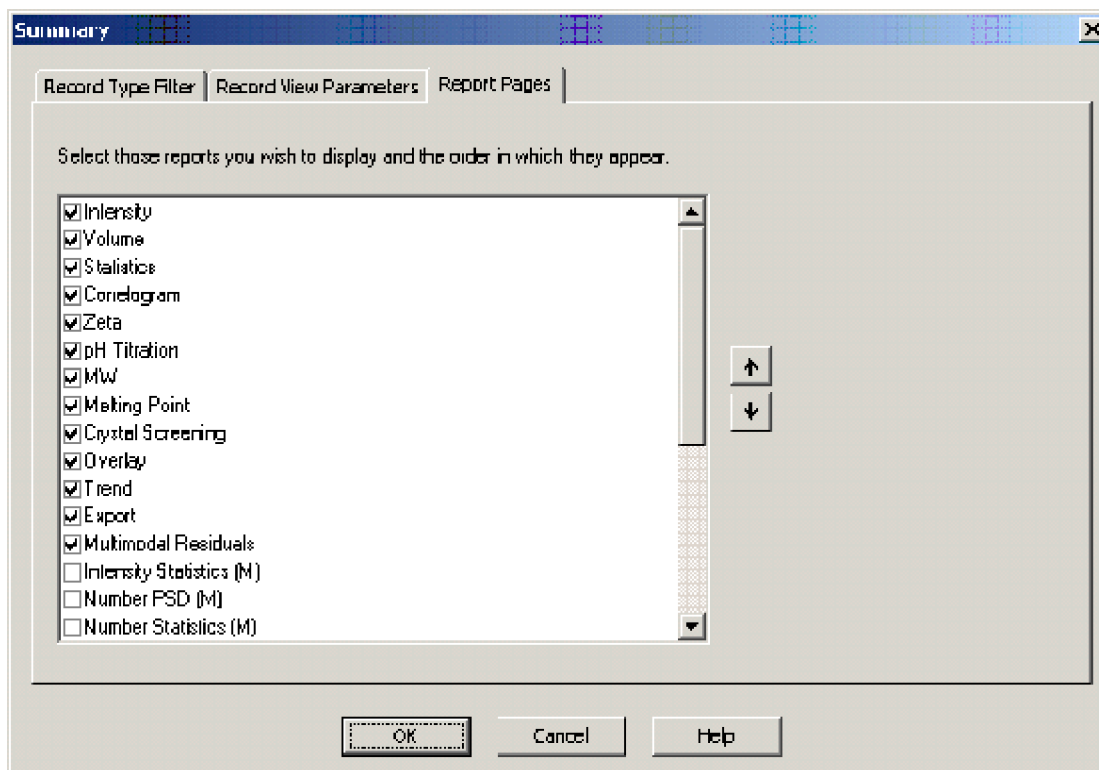

The Report Designer tool in the DTS Software gives users the ability to design custom reports to their specific criteria. A supplemental benefit arising from the Report Designer tool is that custom designed reports can be exchanged between users and integrated into the user's workspace with minimal hassle. In fact, the Malvern DTS Support Group routinely designs reports to customer specifications, that can be sent via email attachment and quickly integrated into the user's software.

To add new reports to your software workspace:

- 1) Copy the new report (name.pag) to the C:\...My Documents\Malvern Instruments\Zetasizer\Reports\en-US\Size folder on your hard drive or design a report to your own specifications using the Report Designer tool.
- 2) Open the DTS software. Select the workspace to be edited, and then click the Configure icon to the right of the Workspace drop down list box.

- 3) Select the Report Pages tab in the Summary window and then select (check) the desired report to be displayed. After clicking OK, the new report will be available for viewing in the DTS software.

4) Note that some of the figures and parameters are software version dependent. So reports designed with higher software versions may not be compatible with earlier software versions.

5) When making changes to an existing report, both the filename AND the internal file name must be changed. By default the internal file name remains the same, and this will cause the software to not display the newly created report. To edit the internal file name, ensure it is displayed on the toolbar [View-ReportName is checked] and then double-click on the entry to edit.
